2.5 The Derivative of the Trigonometric Functions

Name _____ Period ____ Date _____

AP Calculus 2.5 (30-minute plan) · Student sheet

I can…

- find the derivatives of sine and cosine.
- find the derivatives of tangent, secant, cotangent, and cosecant.
- use trig derivatives with the Product and Quotient Rules and to find tangent lines.

Vocabulary · fill in the missing word

Derivatives of sine and cosine — $\frac{d}{dx}\sin x =$ _____ $= -\sin x$

Derivatives of the other trig functions — _____

Part 1 · Notes and examples (fill in each note, then work the example)

Sine and cosine: d/dx sin x = cos x and d/dx cos x = _____.

Example 1

$f(x) = 3\sin x - 2\cos x$. Find $f'(x)$ and $f'(\frac{\pi}{2})$.

Example 2

$f(x) = x\sin x$. Find $f'(x)$ and $f'(\frac{\pi}{2})$.

Tangent and secant: d/dx tan x = $\sec^2 x$ and d/dx sec x = _____.

Cotangent and cosecant: d/dx cot x = $-\csc^2 x$ and d/dx csc x = _____.

Example 3

$f(x) = \tan x$. Find $f'(\frac{\pi}{3})$, and the tangent line at (0, 0).

Part 2 · Partner practice

Partner practice

(AP® Practice) If $y = x \sin x$, then $\frac{dy}{dx} =$

(A) $x \cos x + \sin x$ (B) $x \cos x - \sin x$ (C) $\cos x + \sin x$ (D) $(x + 1) \cos x$
