1.4 Solving Multi-Step Equations

Name _____ Period ____ Date _____

Algebra I 1.4 (30-minute plan) · Student sheet

I can…

- solve two-step equations.
- solve equations using the Distributive Property and by combining like terms.
- write and solve multi-step equations for real-life problems.

Vocabulary · fill in the missing word

Like terms — terms with the same _____ raised to the same power

Distributive Property — a(b + c) = _____

Two-step equation — undo addition or subtraction first, then _____ or division

Part 1 · Notes and examples (fill in each note, then work the example)

Steps: Steps: _____ and combine like terms, then undo _____ or subtraction, then multiplication or _____.

Check: Check by _____ the solution into the original equation.

Example 1

Solve $-4x + 7 = -13$.

Distributing: Distribute to _____ term inside the parentheses.

Example 2

Solve $2(3x - 1) + x = 19$.

Part 2 · Partner practice

Partner practice

Solve $\frac{x}{3} - 4 = 2$.
