3.7 Transformations of Graphs of Linear Functions

Name _____ Period ____ Date _____

Algebra I 3.7 (30-minute plan) · Student sheet

I can…

- describe translations and reflections of linear functions.
- describe stretches and shrinks of linear functions.
- write a function g in terms of f for a transformation.

Vocabulary · fill in the missing word

Parent linear function — f(x) = _____

Translation — f(x) + k _____ up or down; f(x − h) shifts left or right

Reflection — −f(x) in the _____; f(−x) in the y-axis

Stretch / shrink — a · f(x) vertically; f(ax) _____

Part 1 · Notes and examples (fill in each note, then work the example)

Translations: f(x) + k moves the graph _____; f(x − h) moves it _____.

Example 1

Let f(x) = x − 1 and g(x) = f(x) + 3. Write g(x) and describe the transformation.

Reflections: −f(x) reflects in the _____; f(−x) reflects in the _____.

Example 2

Let f(x) = 2x and g(x) = f(−x). Write g(x) and describe the transformation.

Stretches: a · f(x) with a > 1 is a vertical _____.

Example 3

Let f(x) = x + 4 and h(x) = f(3x). Write h(x) and describe the transformation.

Part 2 · Partner practice

Partner practice

Let $f(x) = x$ and $g(x) = x - 5$. Describe the transformation.
