8.1 Defining and Using Sequences and Series

Name _____ Period ____ Date _____

Algebra II 8.1 (30-minute plan) · Student sheet

I can…

- write the terms of a sequence and write a rule for a sequence.
- write a series using summation notation.
- find the sum of a series.

Vocabulary · fill in the missing word

Sequence — an _____ list of numbers; each number is a term

Explicit rule — a _____ for the nth term, a_n, in terms of n

Series — the sum of the terms of a _____

Summation notation — Σ (i = 1 to n) a_i _____ $a_1 + a_2 + \ldots + a_n$; i is the index of summation

Part 1 · Notes and examples (fill in each note, then work the example)

Sequences and series: A **sequence** is an ordered _____; a **series** is the _____ of its terms.

Example 1

Write the first six terms of each sequence.

a. $a_n = 2n + 5$ b. $f(n) = (-3)^{n-1}$

Example 2

Describe the pattern, write the next term, and write a rule for the nth term.

a. −5, 10, −15, 20, … b. 2, 6, 12, 20, …

Summation notation: Σ (i = 1 to n) a_i means _____.

A sum formula: Σ (i = 1 to n) i = _____

Example 3

Write the series in summation notation: 4 + 8 + 12 + … + 100

Part 2 · Partner practice

Partner practice

Write a rule for the nth term: $\frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \ldots$
