9.7 Law of Sines and Law of Cosines

Name _____ Period ____ Date _____

Geometry 9.7 (30-minute plan) · Student sheet

I can…

- find the area of a triangle from two sides and the angle between them.
- use the Law of Sines to solve a triangle (AAS, ASA, or SSA).
- use the Law of Cosines to solve a triangle (SAS or SSS).

Vocabulary · fill in the missing word

Law of Sines — in any _____, $\sin\frac{A}{a} = \sin\frac{B}{b} = \sin\frac{C}{c}$

Law of Cosines — in any _____, $a^2 = b^2 + c^2 - 2bc\cos A$

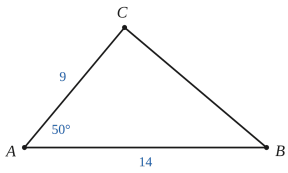

Area of a triangle — Area = _____, using two sides and the angle between them

Part 1 · Notes and examples (fill in each note, then work the example)

Area of a triangle: Area = ½ · b · c · _____ (two sides and the angle between them)

Example 1

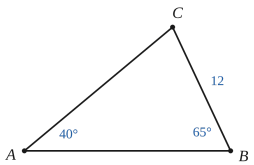

Find the area of △ABC with b = 9, c = 14, and m∠A = 50°. Round to the nearest tenth.

Law of Sines: sin A/a = _____ = _____. Use it for AAS, ASA, or SSA.

Example 2

Solve △ABC with m∠A = 40°, m∠B = 65°, and a = 12. Round to the nearest tenth.

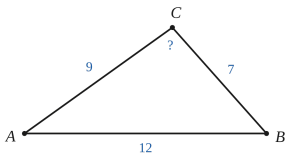

Law of Cosines: $a^2 = b^2 + c^2 -$ _____. Use it for SAS or SSS.

SSS: find the _____ angle first (the one across from the longest side).

Example 3

A triangle has sides a = 7, b = 9, and c = 12. Find its largest angle to the nearest tenth of a degree.

Part 2 · Partner practice

Partner practice

Find c in $\triangle ABC$ with a = 5, b = 7, and $m\angle C = 60°$. Round to the nearest tenth.
