# 5.3 Solving Systems of Linear Equations by Elimination

Name _____ Period ____ Date _____

Algebra I 5.3 (30-minute plan) · Student sheet

**I can…**

- solve systems by adding or subtracting equations.
- solve systems by multiplying first, then eliminating.
- solve real-life problems using elimination.

## Part 1 · Notes: fill in the blanks

Add when the coefficients are _____. Subtract when they are _____.

If no coefficients match, _____ one or both equations first.

Multiply _____ term in the equation.

## Part 2 · Examples (work them with the class)

### Example 1

Solve.

$3x + 2y = 4$

$5x - 2y = 12$

### Example 2

Solve.

$2x + 3y = 1$

$x + 2y = 0$

## Part 3 · Partner practice

### Partner practice

Solve: $x + 3y = 7$ and $2x - y = 0$.
