3.1 Pairs of Lines and Angles

Name _____ Period ____ Date _____

Geometry 3.1 (30-minute plan) · Student sheet

I can…

- identify parallel lines, skew lines, and parallel planes.
- use the Parallel and Perpendicular Postulates.
- identify corresponding, alternate interior, alternate exterior, and consecutive interior angles.

Vocabulary · fill in the missing word

Parallel lines — coplanar lines that do not _____

Skew lines — lines that do not _____ and are not coplanar

Parallel planes — planes that do not _____

Transversal — a line that _____ two or more coplanar lines at different points

Part 1 · Notes and examples (fill in each note, then work the example)

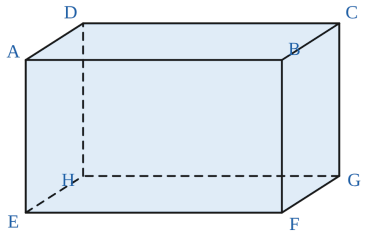

Example 1

Use the box.

a. Name a line parallel to line AB.

b. Name a line skew to line AB.

c. Name a plane parallel to plane ABCD.

Parallel Postulate: if there is a line and a point not on the line, then there is exactly _____ line through the point parallel to the given line. (The Perpendicular Postulate says the same about perpendicular lines.)

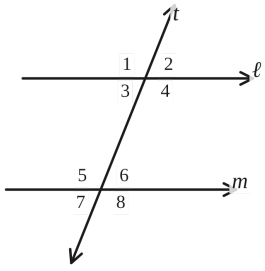

Corresponding angles are in the _____ position at each intersection. **Alternate interior angles** lie between the two lines on _____ sides of the transversal.

Example 2

Use the diagram.

a. Name all pairs of corresponding angles.

b. Name both pairs of alternate interior angles.

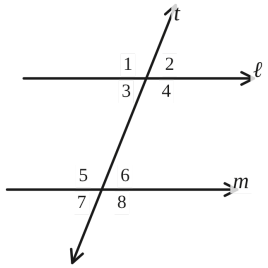

Alternate exterior angles lie _____ the two lines on opposite sides of the transversal. **Consecutive interior angles** lie between the two lines on the _____ side of the transversal.

Example 3

Use the diagram.

a. Name both pairs of alternate exterior angles.

b. Name both pairs of consecutive interior angles.

Part 2 · Partner practice

Partner practice

Use the diagram. Name both pairs of alternate exterior angles.
