5.1 Solving Systems of Linear Equations by Graphing

Name _____ Period ____ Date _____

Algebra I 5.1 (30-minute plan) · Student sheet

I can…

- check whether an ordered pair is a solution of a system.
- solve a system of linear equations by graphing.
- write and solve a system of equations for a real-life problem.

Vocabulary · fill in the missing word

System of linear equations — two or more linear equations with the same _____

Solution of a system — an ordered pair that makes every _____ true; where the graphs intersect

Part 1 · Notes: fill in the blanks

A solution of a system makes _____ equation true.

On a graph, the solution is where the lines _____.

Check the point in _____ equations.

Part 2 · Examples (work them with the class)

Example 1

Is (2, −1) a solution of the system?

$2x + y = 3$

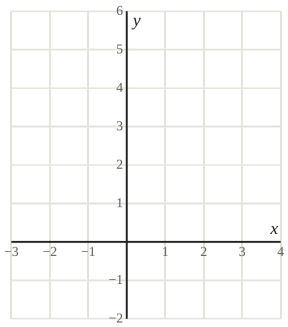

$x - 3y = 6$

Example 2

Solve by graphing.

$y = x + 1$

$y = -2x + 4$

Part 3 · Partner practice

Partner practice

Solve by graphing: $y = 2x - 3$ and $y = -x + 3$.
