Discovery: What's special about a midsegment?

Triangle #1

Name: _____ Partner: _____

Midpoint	Slope	Distance
$M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$	$m = \frac{y_2 - y_1}{x_2 - x_1}$	$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$

Your triangle

A(2, 10) B(0, 0) C(6, 8)

1. Plot A, B, and C. Connect them.
2. D = midpoint of AB. E = midpoint of AC. Plot D and E. Draw segment DE.

   D = _____ E = _____

3. Find the slopes.

   slope of DE = _____

   slope of BC = _____

4. Find the lengths.

   DE = _____ BC = _____

Show your work

5. What do you notice about DE compared to BC? Write one complete sentence.

_____

_____

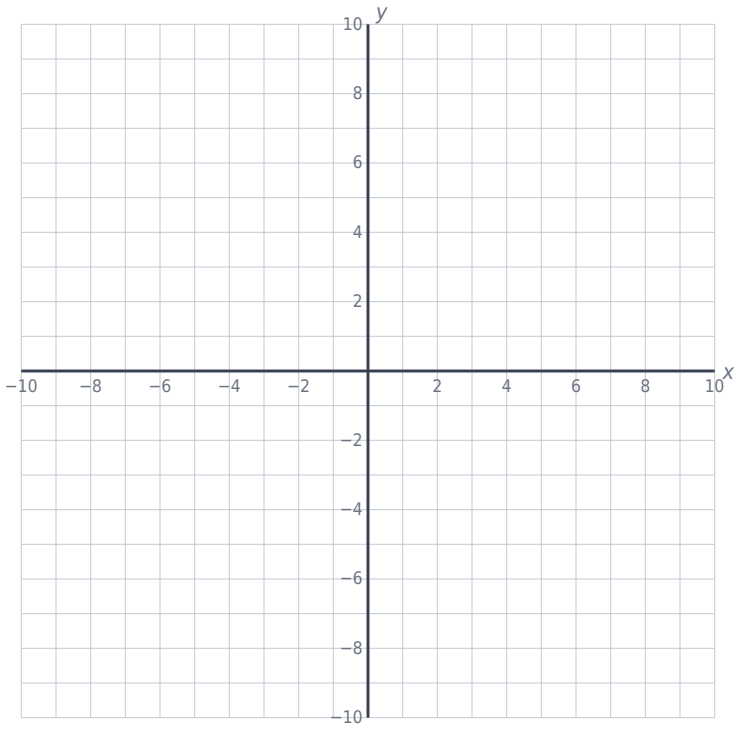

Done early? Find F, the midpoint of BC. Draw DF. Compare DF to AC. Does the same pattern hold?

Discovery: What's special about a midsegment?

Triangle #2

Name: _____ Partner: _____

Midpoint	Slope	Distance
$M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$	$m = \frac{y_2 - y_1}{x_2 - x_1}$	$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$

Your triangle

A(−4, 6) B(−6, −2) C(2, −8)

1. Plot A, B, and C. Connect them.
2. D = midpoint of AB. E = midpoint of AC. Plot D and E. Draw segment DE.

   D = _____ E = _____

3. Find the slopes.

   slope of DE = _____

   slope of BC = _____

4. Find the lengths.

   DE = _____ BC = _____

Show your work

5. What do you notice about DE compared to BC? Write one complete sentence.

_____

_____

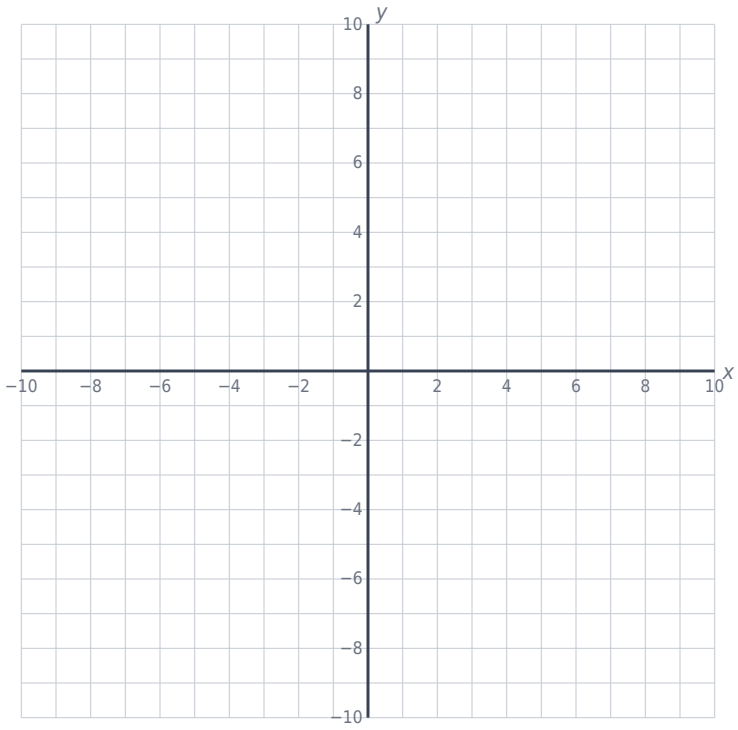

Done early? Find F, the midpoint of BC. Draw DF. Compare DF to AC. Does the same pattern hold?

Discovery: What's special about a midsegment?

Triangle #3

Name: _____ Partner: _____

Midpoint	Slope	Distance
$M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$	$m = \frac{y_2 - y_1}{x_2 - x_1}$	$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$

Your triangle

A(4, −2) B(−4, 4) C(4, 10)

1. Plot A, B, and C. Connect them.
2. D = midpoint of AB. E = midpoint of AC. Plot D and E. Draw segment DE.

   D = _____ E = _____

3. Find the slopes.

   slope of DE = _____

   slope of BC = _____

4. Find the lengths.

   DE = _____ BC = _____

Show your work

5. What do you notice about DE compared to BC? Write one complete sentence.

_____

_____

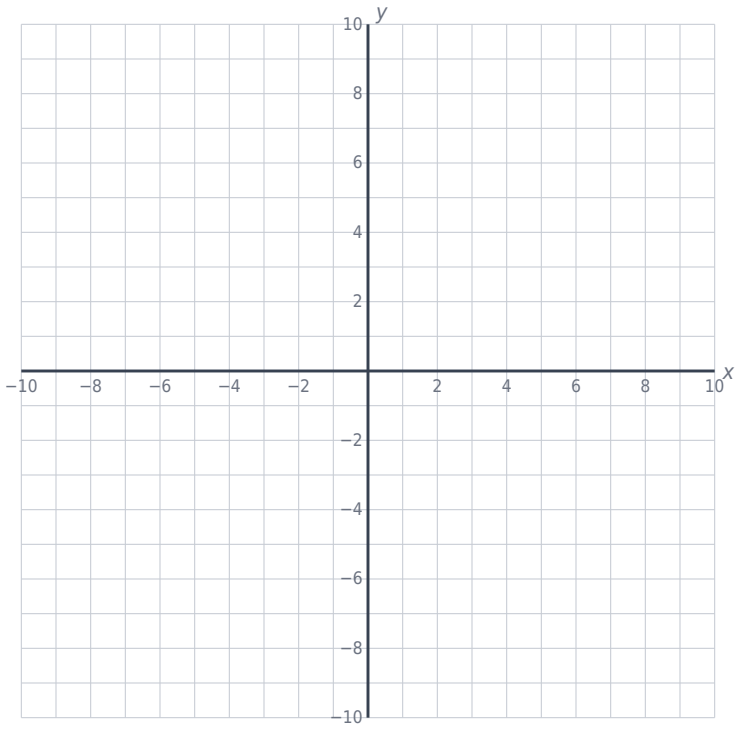

Done early? Find F, the midpoint of BC. Draw DF. Compare DF to AC. Does the same pattern hold?

Discovery: What's special about a midsegment?

Triangle #4

Name: _____ Partner: _____

Midpoint	Slope	Distance
$M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$	$m = \frac{y_2 - y_1}{x_2 - x_1}$	$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$

Your triangle

A(−8, 0) B(0, 8) C(6, 0)

1. Plot A, B, and C. Connect them.
2. D = midpoint of AB. E = midpoint of AC. Plot D and E. Draw segment DE.

   D = _____ E = _____

3. Find the slopes.

   slope of DE = _____

   slope of BC = _____

4. Find the lengths.

   DE = _____ BC = _____

Show your work

5. What do you notice about DE compared to BC? Write one complete sentence.

_____

_____

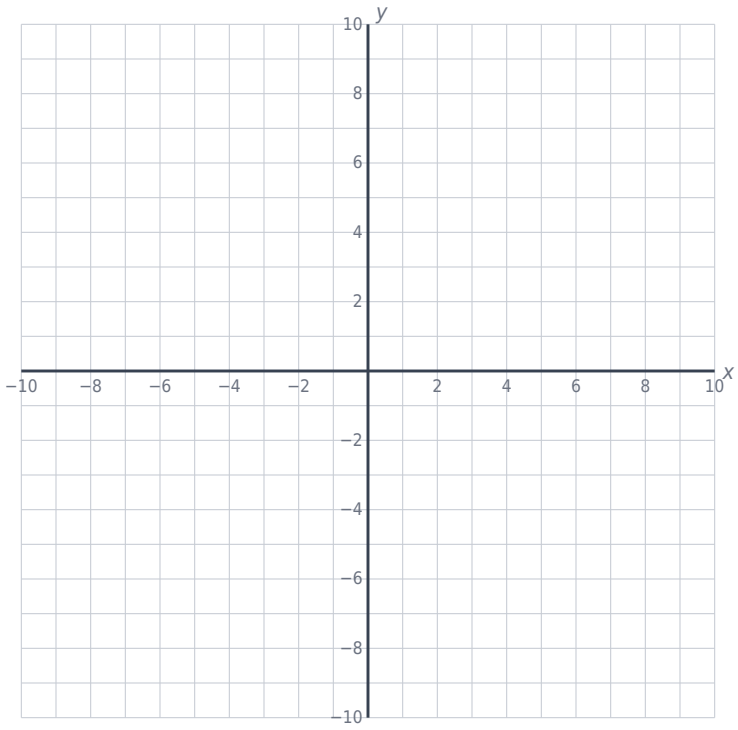

Done early? Find F, the midpoint of BC. Draw DF. Compare DF to AC. Does the same pattern hold?

Discovery: What's special about a midsegment?

Triangle #5

Name: _____ Partner: _____

Midpoint	Slope	Distance
$M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$	$m = \frac{y_2 - y_1}{x_2 - x_1}$	$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$

Your triangle

A(0, −6) B(−8, 2) C(2, 2)

1. Plot A, B, and C. Connect them.
2. D = midpoint of AB. E = midpoint of AC. Plot D and E. Draw segment DE.

   D = _____ E = _____

3. Find the slopes.

   slope of DE = _____

   slope of BC = _____

4. Find the lengths.

   DE = _____ BC = _____

Show your work

5. What do you notice about DE compared to BC? Write one complete sentence.

_____

_____

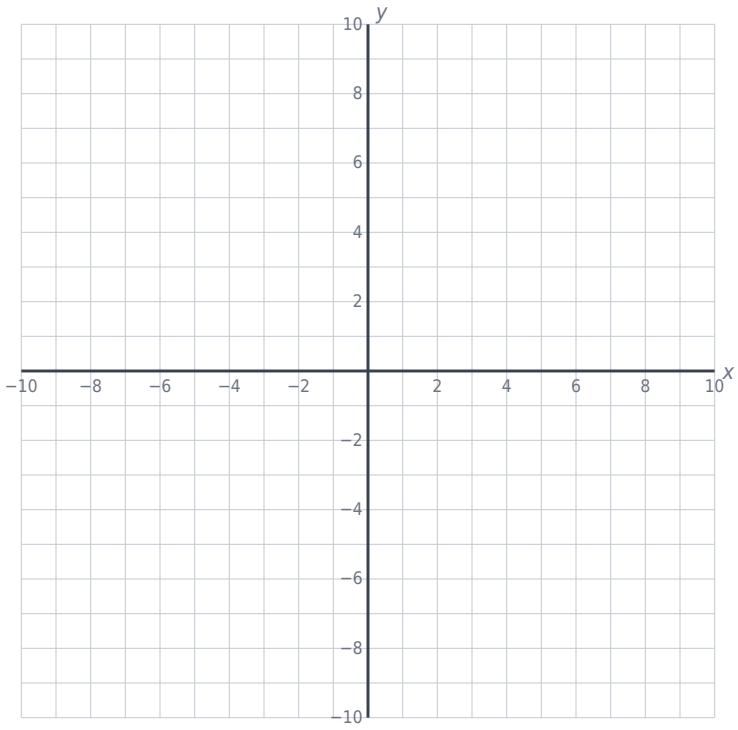

Done early? Find F, the midpoint of BC. Draw DF. Compare DF to AC. Does the same pattern hold?

Discovery: What's special about a midsegment?

Triangle #6

Name: _____ Partner: _____

Midpoint	Slope	Distance
$M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$	$m = \frac{y_2 - y_1}{x_2 - x_1}$	$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$

Your triangle

A(10, 6) B(2, −4) C(2, 8)

1. Plot A, B, and C. Connect them.
2. D = midpoint of AB. E = midpoint of AC. Plot D and E. Draw segment DE.

   D = _____ E = _____

3. Find the slopes.

   slope of DE = _____

   slope of BC = _____

4. Find the lengths.

   DE = _____ BC = _____

Show your work

5. What do you notice about DE compared to BC? Write one complete sentence.

_____

_____

Done early? Find F, the midpoint of BC. Draw DF. Compare DF to AC. Does the same pattern hold?
