8.1 Similar Polygons

Name _____ Period ____ Date _____

Geometry 8.1 (30-minute plan) · Student sheet

I can…

- write a similarity statement, the congruent angles, and a statement of proportionality for similar polygons.
- use a scale factor to find a missing side length in similar polygons.
- find the perimeter and area of a polygon from a similar polygon.

Vocabulary · fill in the missing word

Similar figures — same shape, not necessarily the same size: _____ angles are congruent and corresponding side lengths are proportional

Scale factor — the ratio of _____ side lengths (image : original)

Statement of proportionality — an equation showing the ratios of all pairs of _____ sides are equal

Corresponding parts — parts in the same position, matched by the order of the letters in the _____ statement

Part 1 · Notes and examples (fill in each note, then work the example)

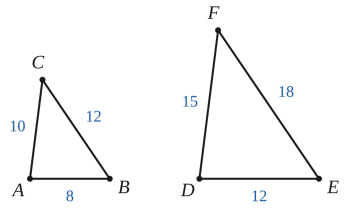

Similar polygons: Two polygons are **similar** when corresponding angles are _____ and corresponding side lengths are _____.

Scale factor: The ratio of corresponding side lengths is the _____ _____.

Corresponding parts: If △ABC ~ △DEF, then ∠A ≅ ∠____, and AB corresponds to _____.

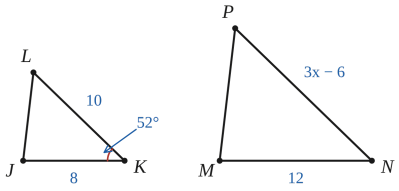

Example 1

△ABC ~ △DEF. Find the scale factor from △ABC to △DEF. List the pairs of congruent angles and write a statement of proportionality.

Example 2

△JKL ~ △MNP. JK = 8, KL = 10, MN = 12, and NP = 3x − 6. Find x. If m∠K = 52°, what is m∠N?

Perimeters of similar polygons: if the scale factor is k, the ratio of the perimeters is _____.

Areas of similar polygons: if the scale factor is k, the ratio of the areas is _____.

Example 3

Two triangles are similar. Their areas are 50 cm² and 18 cm². A side of the larger triangle is 15 cm. Find the corresponding side of the smaller triangle.

Part 2 · Partner practice

Partner practice

△ABC ~ △DEF. AB = 10, BC = x + 3, DE = 4, and EF = 6. Find x.
